

(a) Dense expansion: generated evidence recovers missing semantics

Query A

How are various types of income taxed differently in the USA?

Generated references

Dividends are taxed as **capital gains** or **ordinary income**.
Long-term capital gains depend on the holding period.
Rental and self-employment income follow different tax rules.

Relevant passage

Dense rank **271** → **5**

... **Long-term capital gains** are taxed at a rate below the marginal rate, particularly for wealthy individuals. They differ from **wage or ordinary income**, partly to encourage long-term investment ...

The references supply the document-side language that the original query leaves implicit.

(b) Sparse anchoring preserves original-query evidence

Query B

How to find **cheaper alternatives** to a traditional **home telephone line**?

Generated references

Consider **VoIP services** such as Vonage.
Check whether an **internet service provider** offers integrated phone service.
Explore mobile, satellite, and community-based phone options.

Relevant passage: supported by both signals

Sparse rank **31** → **1**

Try to use a **VOIP service provider** ... these services can be used as an **alternative** to your **home phone line**.

Expansion-only match: no original-query support

Rewrite rank **5** → **filtered**

Internet Phone: make calls with a **VoIP dialer** ... reseller packages, login credentials, prices, and contact details ...
